ABOUT ME

Data analysts are most useful when they understand what's actually happening inside a business — not just what's in the dataset. I come to analytics with five years of operational experience across fintech, crypto, and SaaS, where I worked close to the problems that data is meant to solve: revenue leakage, process inefficiencies, customer drop-off, and decisions being made without enough information.

That context shapes how I work. I don't just query and visualise — I ask why the number matters, who needs to act on it, and what format makes it usable. Technically, I work across Excel, SQL, Power BI, and Looker Studio, with a growing foundation in Python and data engineering.

I'm building toward a practice focused on operational and business analytics — helping teams and organisations turn their data into something they can actually use.

EDUCATION & TRAINING

Data Visualisation Associate (Internship) | *Excelerate — Saint Louis University* | April 2026 – June 2026 | Remote

- Analysed international student pipeline data across three datasets (Applicant, Connect, SEVIS) using PostgreSQL via Supabase and pgAdmin 4.
- Built and iterated on dashboards in Looker Studio to surface insights on student enrollment trends and pipeline health for university stakeholders.
- Validated SQL queries and documented data transformation logic to support team reproducibility and reporting accuracy.
- Collaborated with a cross-functional team to produce weekly analytical deliverables under structured sprint timelines.

Data Engineering Track | *ALX Africa* | January 2025 – Present | Remote

- Currently completing a structured data engineering programme covering data pipelines, warehousing concepts, and cloud data infrastructure.
- Conducted an end-to-end data investigation into water access and infrastructure challenges across a municipality, using SQL to query, clean, and analyse large structured datasets.
- Identified patterns in water source availability, queue times, and population access gaps — translating raw data into actionable findings for operational decision-making.
- Built a Power BI dashboard to visualise infrastructure coverage, regional disparities, and priority intervention areas for stakeholder reporting.
- Developing broader data engineering skills across Python, Excel, data pipelines, and data modelling as part of an ongoing structured programme.

Associate Data Analyst — SQL Track | *DataCamp* | October 2024

- Completed the Associate Data Analyst certification with a focus on SQL for data analysis, including querying, aggregation, joins, subqueries, and window functions.
- Applied skills across real-world case studies in business and operational analytics.

B.Sc. (Hons) Physics | *Ahmadu Bello University, Zaria*

EXPERIENCE (CUSTOMER SUCCESS & OPERATIONS)

Prior to transitioning into data analytics, I spent five years in customer success and operations roles — building a direct understanding of the business problems that data teams are asked to solve.

Customer Success Analyst — *Quidax* | March 2025 – March 2026 | Remote

Customer Success & Churn Recovery Associate — *Paystack (Rightcom BPO)* | June 2023 – February 2025 | Remote

Sales & Customer Support Agent — *Crop2Cash* | April 2023 – November 2023 | Ibadan, Nigeria

Learning & Development Officer — *Altara Credit Ltd* | October 2022 – March 2023 | Ibadan, Nigeria

Customer Support Representative — *iSON Xperiences (Airtel)* | September 2021 – September 2022 | Ibadan, Nigeria

SKILLS

Technical: SQL (PostgreSQL), Power BI, DAX, Looker Studio, Python, Excel, Google Sheets, Supabase, pgAdmin 4, GitHub

Soft Skills: Data Storytelling, Business Communication, Stakeholder Management, Attention to Detail, Cross-functional Collaboration, Problem Solving, Proactive Ownership

PROJECTS

All projects are documented with findings, methodology, and visuals on my portfolio and GitHub:
